

ADOBE® CONTRIBUTE® CS3 EASILY UPDATE WEBSITES AND BLOGS

With Adobe Contribute CS3 software, you can:

- Enable content authors to update and edit multiple websites and blogs from a single application.
- Maintain site integrity and look and feel through integration with Dreamweaver templates.
- Control website authoring permissions with site administration and connection management consoles.
- Give users the ability to post and publish content from within Microsoft Office applications.
- Help users get started with blogging.
- Enjoy improved HTML rendering—compatibility with Dreamweaver CS3.

With Adobe Contribute CS3, content authors can post and publish content to multiple websites and blogs from a single application. And because Contribute CS3 works seamlessly with Adobe Dreamweaver® software, website integrity is maintained—even when multiple authors update content across the site.

Easily update web content

For professional web designers, web developers, and website administrators, ensuring that website and blog content remains fresh and current is an enormous challenge. Often this means delegating the responsibility for updating web content and blog entries to numerous contributors, which can put website integrity at risk, especially when disparate tools are used for the different tasks. With Adobe Contribute CS3, anyone can quickly and easily update multiple websites and blogs using a single application—without compromising site integrity.

Simply browse to the website that needs updating or the blog that requires a new entry, make changes to the content using Adobe Contribute CS3, and publish when finished. You can also publish content directly from Microsoft Word, Excel, or Outlook.

Use one tool for publishing to multiple websites and blogs

With Adobe Contribute CS3, anyone can update website content or create blog entries using a single application. True WYSIWYG authoring capabilities let users edit any website or blog in three simple steps, dramatically reducing editing time. Alternatively, authors can publish directly from within Microsoft Office applications in a few clicks. Just open the document that contains the content you want to post, click Publish, and select the target website or blog.

Even rich media, images, movies, and Adobe Flash® (FLV) files can be easily included in any website or blog using Adobe Contribute CS3. In Edit mode, just drag the file onto the website or blog entry. Adobe Contribute CS3 automatically uploads and posts it to the site when published. Because authors edit content and add images in their actual context on the website or blog before publishing, content length and style, as well as image sizes, are right the first time. With Contribute CS3, you can embed PDF documents directly into your web page or blog entry. You can also convert your Microsoft Office documents to Adobe PDF and insert them into a web page.*

Maintain website integrity

Seamless integration between Adobe Contribute CS3 and Dreamweaver templates ensures that your website's look and feel is maintained, even when multiple authors update content across the site. Web designers and developers can create page templates with editable regions during website creation and then delegate routine content updates to business users. Because content authors can update only the areas designated by the designer or webmaster, the website always appears as the designer intended. And just like Dreamweaver, Adobe Contribute CS3 preserves code quality and formats through the editing process.

System requirements

Windows®

- 750MHz Intel® Pentium® 4 or Intel Centrino® processor
- Microsoft® Windows XP with Service Pack 2 or Windows Vista™ Home Premium, Business, Ultimate, or Enterprise

Macintosh

- 350MHz PowerPC® G4 or G5 or Intel® processor
- Mac OS X v.10.4.8
- 512MB of RAM
- 1.4GB of hard-disk space
- 1,024x768 monitor resolution
- DVD-ROM drive
- Internet or phone connection required for product activation
- Firefox 2.0 required for browser plug-in

Top reasons to buy Adobe Contribute CS3

Unified web publishing

Publish to multiple websites and blogs from a single application.

Easy Flash (FLV) upload

Include Adobe Flash (FLV) files in websites and blogs by simply dragging and dropping the file onto the web page or into the blog entry during edit. Contribute CS3 automatically uploads the file and posts it to the site on publish.

Compatible with Windows Vista and Intel based Macs

Adobe Contribute CS3 works on Intel and PowerPC based Macs and on Windows XP and Windows Vista systems.

Quick web page and blog posting from Microsoft Office

Publish content directly from within Microsoft Office applications using the template of your choice, significantly reducing your editing time. Contribute CS3 adds buttons to your Office applications that allow you to publish directly to a website or post to a blog without even opening Contribute.

WSIWYG blog templates

Enjoy the convenience of authoring blog entries offline in your own template, with convenient WYSIWYG layout and full-featured text editing. Drag and drop rich media elements directly into your blog as you edit it.

Editing from Internet Explorer 7 and Firefox 2

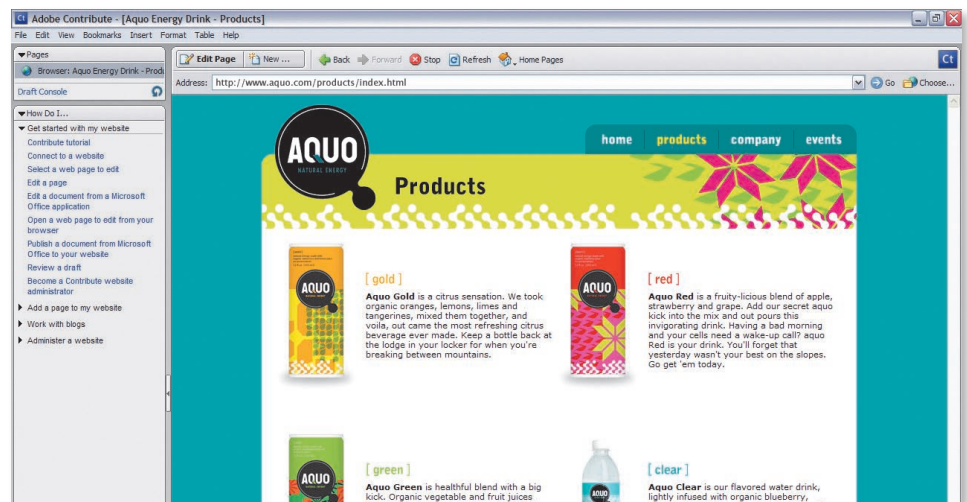

Use Contribute browser buttons to edit the page you are browsing or to post its content to a blog. The latest versions of Internet Explorer and Firefox browsers are now supported.

Convenient PDF support

Embed PDF documents directly into your web page or blog entry. Conveniently convert Microsoft Office documents to PDF, and then insert them into your web page.*

Standard protocol support

Post your updates using any standard file-transfer, web-authoring, or blogging protocol, including FTP, SFTP, WebDAV, MetaWeblog, and Atom.
